DESIGN & INSTALLATION IDEAS

COMMON DESIGN

Different colour of the same size, shape and finishing. Different sized or shaped tiles with the same colour and finishing. Different surface texture with the same colour. Mural design using mosaic tiles.

PLANNING

You should study and determine the environment of the area in which the tiles are to be installed and the technical characteristics of the tiles required.

DETERMINE

Any special treatment needed for the area that needs to be tiled such as water proofing, special bedding or leveling of the base. Width of joints and type of grout needed.

ORGANIZE & CHECK

The straightness of floors and walls. The tiles for the different subsize and shades. The sequence of the whole tiling job.

LAYING OUT

Dry-lay the tiles first to minimize the number of cut tiles and to ensure that the shades are harmonious. Mark the wording lines using the wall as a guide.

Apply the adhesives according to the manufacturer's instructions. Carefully lay the tiles section by section, leveling each with its neighbour. Lay the border tiles, leave a grout line between the border tiles and the wall.
